

My Portfolio Website

Ares Tutar

Introduction

This report briefly explains the portfolio website I created for my assessment. The website presents my CV, contact information, and a short introduction about myself. It is designed with a dark theme and blood-red accents to match my personal style.

Website Description

The website is built using simple HTML and CSS. It includes the following sections:

- About Me
- CV (embedded and downloadable)
- Contact Information

The website is hosted using GitHub Pages. All files, including my CV, are stored in my GitHub repository.

Reflection

I learned how to create a simple portfolio website, upload files to GitHub, and publish the site using GitHub Pages. I also learned how to embed a PDF and how to manage updates using Git. This project helped me understand the basics of web development and version control.
